

Clojure Developer

Up to £60,000 depending on experience

What would be your dream job? How about one where you can work remotely and spend your time working with Clojure? How about one where your voice will be heard and you can help shape the tools that are built? If so, this could be the job you're looking for!

The Role

We are currently expanding our development team and are looking for someone with strong backend Clojure skills. You will be working on our web app and ensuring that we continue to deliver reliable and scalable solutions to our clients.

The app enables clients to interact with the data in their warehouse and schedule the ingestion of data from other sources and carry out transformations on it. We have an ambitious roadmap for 2021, which you will be helping us deliver.

About you

You will have strong backend development skills (extra points if you're a polyglot), enjoy problem solving and accept that data is routinely 'dirty' and that things occasionally break and will need fixing.

We're looking for someone who has experience of web application development and working with distributed systems. Data engineering and front end experience would also be beneficial.

The work can sometimes be fast paced, especially when we're approaching the end of a sprint, so a cool head and a can-do attitude is a must.

Our Tech Stack

We love Clojure/Clojurescript and want to use it for everything, so almost all of our backend code is written in Clojure, and we use a mix of CLJS and JS on the front end. We've started selecting standard libraries for all of our code to ensure that everything has the same level of functionality and that we're using the best libraries for the task.

We deploy everything in AWS and make use of a lot of their services, especially RDS, S3, Fargate, ECS and Cloudfront. Recently we started using AWS Code Deploy and Code Pipeline to automate the deployment of our main services and create a CI/CD pipeline, and this is being expanded to automate all deployments.

Github stores all our code repos and everyone in the company uses Slack. There are also various other online services for log management, monitoring and tickets.

About us

kleene.ai is a fast-growing startup that has been operating for almost 4 years and was established with the goal of revolutionising data. We believe that all companies, regardless of size, should be able to easily access and understand their data. Our goal is to provide clients with the ability to access any of their data sources from within a simple interface without any technical knowledge.

This is an exciting time to join us, the number of clients we have is continuing to grow and we're expecting to increase the dev team further in the coming months.

Apply today

Please send your CV and cover letter to careers@kleene.ai, and we look forward to hearing from you.
